

UNIVERSAL CONTROLLER LITE (MCS-16)

VERSION 2 USER GUIDE

For the operation of standard vehicle rooftop lighting, secondary lighting and power management

This document is aimed to guide purchasers, installers and then the user of the Universal Controller Lite (MCS-16) simply and smoothly through its operation so that it can be applied in the most effective manner. As such it is divided into the following sections:

Embedded software enables simple system set-up together with amendments without the need to change wiring

Section 1 - User Guide

A : Device Family Overview

With built-in Siren

Universal Controller Lite (MCS-16)
 Description: One device including all features **with** a built-in siren.
 Part Number: UNI-LIT-001

Without built-in Siren

Universal Controller Lite (MCS-16)
 Description: One device including all features **without** a built-in siren.
 Part Number: UNI-LIT-002

The following parts are current compatible switching options for controlling hazard warning equipment via the Universal Controller Plus (MCS-32).

Mini Handset (MCS-T8)

Description: Universal Multi-Way Handset with 7 or 8 buttons as standard.
 Optional built-in PTT.
 Part Number: UNI-MIN-XXX

Slimline Flush Fit Switch Unit (MCS-F5)

Description: Universal Multi-Way Switch Unit with 5 small or 5 small and one large button as standard.
 Part Number: UNI-SLM-XXX

Midi Handset (MCS-T10)

Description: Universal Multi-Way Handset with 8, 9 or 10 buttons as standard.
 Optional built-in PTT.
 Also available with quick fit rubber shroud.
 Part Number: UNI-MID-XXX

Maxi DIN/Flush Fit Switch Unit (MCS-F14)

Description: Universal Multi-Way Switch Unit with 13 or 14 buttons as standard.
 Part Number: UNI-MAX-XXX

MaxiPlus Handset (MCS-T16)

Description: Universal Multi-Way Handset with 14, 15 or 16 buttons as standard.
 Optional built-in PTT.
 Part Number: UNI-MXH-XXX

MaxiPlus DIN/Flush Fit Switch Unit (MCS-F16)

Description: Universal Multi-Way Switch Unit with 13 or 14 buttons as standard.
 Part Number: UNI-MXF-XXX

Universal Handset Plus (MCS-T17)

Description: Universal Multi-Way Handset with 16 buttons in total.
 Optional PTT side grab switch.
 Part Number: UNI-HAP-XXX

Mega20 Flush Fit Switch Panel (MCS-F21)

Description: Universal Multi-Way Switch Panel with 20 buttons. This unit was custom designed specifically for use in a Skoda Scout.
 Part Number: UNI-MUL-XXX

Universal Hand Held Microphones

Description: Stand-alone dynamic microphone.
 Part Number: UNI-MIC-003
 Description: Dynamic microphone for use with handset.
 Part Number: UNI-MIC-006

B : General Overview

Universal Controller Lite (MCS-16)

The Universal Controller Lite (MCS-16), Part Number UNI-LIT-001, is a device used for controlling hazard warning lighting equipment that incorporates a built-in siren amplifier, along with a number of other useful vehicle power management features, such as run-lock circuitry, split charger switching logic, head lamp flashing and priority load shedding. A version without a siren amplifier is also available (UNI-LIT-002).

The main feature of this device is its ability to be fully 'user' programmed via a PC (usually a Laptop). Any input or combinations of inputs can be used to control any output or combination of outputs as operationally specified for vehicles used by the Emergency or Recovery Services. The operational interface is normally done via one of many Multi-Way Switch Units or individual switches from RSG. In addition to this, under certain conditions, the MCS-16 will operate with some industry standard switches that are already in circulation or acquired from new.

The programming software is supplied free of charge with the device and allows the user to create 'Configuration Files' unique to each application that can be easily amended or upgraded if required, thus, eliminating the need to add or remove relays and wires to an installation if the end user decides the original settings are not best suited to their application.

Also, if the MCS-16 does not contain sufficient switching functions in its own right, consider using the larger Universal Controller Plus (MCS-32).

The unit is primarily ideal for controlling the vehicle lightbar, together with other peripheral light heads, particularly when interaction with other vehicle functions such as tailgate opening or hand brake operation. This is possible via a variety of switching devices ranging from a Universal Multi-Way Switch unit or via a simple array of toggle switches. When a Multi-Way Switch unit is used, it is programmed using the MSC-16 software that allows each switch function to be uniquely defined in terms of being either a single or a multi functional switch (hot key) along with one of 8 colours.

As well as all the above features the unit also has the ability to interface with vehicle CAN Bus signals or, alternatively, when fully developed operate with the Home Office Single Vehicle Architecture CAN Bus protocol as specified in publication 39/11. Therefore, vehicle operational signals can be obtained directly from its electronic control systems via the data bus rather than picking-up from the electrical/electronic signal associated with a particular vehicle function as in an indicator or brake light. As an established supplier of hazard warning control systems and data recorders RSG now has a very comprehensive library of CAN Bus data from a wide variety of vehicles that it can make available to users of the MCS-16.

In addition to controlling blue lights and sirens the MCS-16 can also communicate with other devices usually found on an Emergency Services vehicle such as Data Recorders and MDT's that is usually achieved via it's CAN Bus or RS232 connections that in turn can communicate with the vehicles Can Bus or similar protocols if required.

Finally to help with installation and fault finding the MCS-16 is fitted with 24 diagnostic LED's, each of which can display one of three indication colours (green, amber and red) to give immediate feedback without the need for a PC connection.

One Box Compatibility

As a pro-active member of the One Box Consortium RSG is constantly striving to keep its products concurrent with this standard and as such is confident that devices in the Universal range and Multi-Way Switch units meet the Single Vehicle Architecture (SVO) and Driver & Vehicle Data Management System (DVDMS) criteria.

Product Versions

As the MCS-16 and the associated versions of Multi-Way Switch units are all fully programmable via the 'free' application software there is only one version of device to purchase and stock. This also means that any application written can be held confidentially within your own company without the involvement of RSG. That said in order to get the most out of this device RSG highly recommends that in conjunction with using this manual clients take advantage of RSG's free advice and training services associated with this product.

C : Compatible Switch Units

Universal Multi-Way Switch Units

A range of Universal Multi-Way handsets and switch units have been developed for use with the Universal Controller Lite (MCS-16). An extension lead is plugged in to the RS485 port an appropriate adaptor is added and the handsets simply plugs in.

Each button can operate independently or in conjunction with other buttons, as well as having unique legends and back light colour, therefore each device would need to be uniquely configured. A configuration specification sheet is available which allows you to initially define the solution required along with the associated handset which will depend upon the level of control necessary.

Details of the operation and customisation of the Universal Multi-Way handsets are explained later in this manual or alternatively contact our sales team to verify that the handset you wish to use can be accommodated.

Mini Handset (MCS-T8)

Description: Universal Multi-Way Handset with 7 or 8 buttons as standard. Optional built-in PTT.

Part Number: UNI-MIN-XXX

Midi Handset (MCS-T10)

Description: Universal Multi-Way Handset with 8, 9 or 10 buttons as standard. Optional built-in PTT.

Also available with quick fit rubber shroud.

Part Number: UNI-MID-XXX

MaxiPlus Handset (MCS-T16)

Description: Universal Multi-Way Handset with 14, 15 or 16 buttons as standard. Optional built-in PTT.

Part Number: UNI-MXH-XXX

Universal Handset Plus (MCS-T17)

Description: Universal Multi-Way Handset with 16 buttons in total. Optional PTT side grab switch.

Part Number: UNI-HAP-XXX

Slimline Flush Fit Switch Unit (MCS-F5)

Description: Universal Multi-Way Switch Unit with 5 small or 5 small and one large button as standard.

Part Number: UNI-SLM-XXX

Maxi DIN/Flush Fit Switch Unit (MCS-F14)

Description: Universal Multi-Way Switch Unit with 13 or 14 buttons as standard.

Part Number: UNI-MAX-XXX

MaxiPlus DIN/Flush Fit Switch Unit (MCS-F16)

Description: Universal Multi-Way Switch Unit with 13 or 14 buttons as standard.

Part Number: UNI-MXF-XXX

Mega20 Flush Fit Switch Panel (MCS-F21)

Description: Universal Multi-Way Switch Panel with 20 buttons.

This unit was custom designed specifically for use in a Skoda Scout.

Part Number: UNI-MUL-XXX

Universal Hand Held Microphones

Dynamic, hand-held communications devices that offer extremely low sensitivity to hum pick-up and low susceptibility to radio frequency interference and is supplied complete with a 1m curly cord which extends up to 3 metres.

The microphone can be used a a stand-alone unit or in conjunction with a Universal Multi-Way handset

Description: Dynamic, hand-held communications devices designed for use as a stand-alone device or in conjunction with a Universal Multi-Way handset.

Part Numbers: UNI-MIC-003 (with adaptor) UNI-MIC-006 (without adaptor)

Alternative PWM Handsets

The 'Standard Factory Set-up' software with the Universal Controller Lite (MCS-16) allows compatibility with certain alternative PWM handsets.

As there are many types of handsets/keypads available due to variations in legends and switch actions it is likely that some configuration of the Universal Controller Lite (MCS-16) would be required. In most cases this would be achieved via the built-in programming interface.

D : Typical System Specifications

Single handset with optional built-in microphone

Single handset with PA microphone

Two handsets not exceeding 20 buttons in total

For applications requiring between two and four handsets

E : Product Specification

Product Overview

The Universal Controller Lite (MCS-16) consists of a main control box which contains everything required to control a vehicle mounted hazard warning system, typically comprising rooftop lighting, secondary hazard warning lights and audio equipment. It has 16 outputs and 16 standard inputs with power management functions including run lock, split charging, load shedding and headlight flash, plus many more, some of which may be implemented via the vehicle CAN Bus system. It also includes a logic switch module to facilitate the control of auxiliary add-on devices such as: Gateway Radio Controller, Audio Interface Controller (Intercom with pre-recorded 'voice' alerts) and Fan Controller.

Operate the controller through one of our range of fully compatible hand held or dash mounted switch units and you have an economical hazard warning control system that does not compromise on features or functionality.

System Intelligence

The main control unit is supplied with default settings that will suit a variety of applications, however it can be simply customised to match the end users specific application by plugging in to a laptop/desktop PC and utilising the 'easy to use' complimentary software.

Human Machine Interface (HMI)

We have developed a collection of switch units specifically designed to interface with the Universal Controller Plus (MCS-32). They range from a 7-way handset through to a 16-way flush/DIN mount unit, with every conceivable combination in between. Handsets have the facility to operate a Public Address (PA) system via an integral microphone and the option to allocate any button to operate the Push to Talk (PTT) feature. Full details are given later in this catalogue.

One Source, One Solution

In order to simplify the installation process each unit is supplied fully loaded with all the necessary features and functions to implement a comprehensive system. Simply enable the required function via the 'easy to use' software.

Logic Functions

An abundance of logic functions means complex applications are no longer difficult to implement, particularly where certain operations are interlinked with others. So, carrying out 'and/or' functions and implementing 'do this when' or 'stop this when' are simple to apply together with the facility to alter functions allowing continual client synchronisation.

System Configuration

This is a simple 3-stage process which entails enabling and labelling inputs and outputs, configuring the system operation and downloading the application onto the unit. This operation need only be done once, when completed it can be simply be transferred onto other units via a laptop.

General Features and Functions

OUTPUTS

16 Outputs:

- 8 Hi Power Outputs
 - 20 Amps per channel (40 Amps total)
 - Current limiting
 - Multi flash patterns
 - Timer shutdown
 - Voltage drop out
- 4 Low Power Outputs
 - 600mA per channel
 - Positive & negative polarity switching
 - Provide monitoring signal inputs
 - Negative polarity to switch low power relay
- 4 Medium Power Outputs
 - 2.5 Amps per channel
 - Positive & Negative polarity switching
 - Provide monitoring signal inputs
 - Drive relays
 - Small motors
- 2 diode pairs built in for headlight and/or tail light flashers
- Output to data logger
- Electronic Fuses
 - Electronically adjustable
 - Electronically tripped

INPUTS

19 Inputs:

- 16 Standard Inputs
 - 8 negative switching
 - 8 positive switching
 - Software configurable
 - External reset
 - Standby input
- 1 Audio Inputs
 - Mic input
- 2 Mode Inputs
 - Reset
 - Standby

MULTI-WAY SWITCH OPTIONS

- Universal Multi-Way handset can be fully configured using the MCS software
- Single or up to 4 handsets

SERIAL DATA PORT

- USB x 1
- Link with third party MDT terminals

CAN OR CAN TYPE DATA PORT

- Link to RSG complementary devices such as a lightbar
- Link to other industry new standard devices
- Link with legacy equipment - PWM

USER INTERFACE

- 24 illuminated status indicators
- Indicates flash pattern
- Communication status
- Provides output status
- Green - OK
- Red - Over current
- Amber - Low voltage

Software Operational Modules

100 WATT SIREN

- Supports 8 or 11 ohm speakers
- Can be enabled from an input or handset
- Air horn input
- HRT positive or negative activation
- Multiple siren tones selected from software
- Monitor signal active when siren on
- PA
- UK and European sounds
- City Mode volume reduction feature
- Workshop mode volume suppression feature for testing
- Can be linked with other MCS siren devices to give two vehicle effect

LOAD SHEDDING MODULE

- Via internal or external monitoring
- Automatic in conjunction with other equipment activation

FAN CONTROL MODULE

- Control up to 4 intake/extractor fans
- Reverses power supply to fans
- Requires 4-way relay expansion module

SALOON LIGHTING MODULE

- Ideal to control internal ambulance lighting
- Manual, semi and full automatic operation

CABINET ANTI-TAMPER MODULE

- Monitor 16 ambulance medical lockers
- Ideal for monitoring medical consumables/medicines
- Cabinet re-stock indication

AUDIO INTERCOM CONTROLLER (operates with external device)

- Announce pre-recorded messages
- Duplex or simplex intercom

SPLIT CHARGE CONTROLLER

- Monitors primary battery voltage
- Output drives charging solenoid to charge secondary battery
- Solenoid in and out voltage programmable

RUNLOCK CONTROLLER

- Outputs
 - 1 dedicated unlock outputs
 - Additional outputs assigned from software
- Enable Inputs
 - Inputs assigned in software
 - From handset, handbrake, remote button etc.
 - Hi or Lo inputs
- Reset Inputs
 - Inputs assigned in software
 - From brake light, remote button etc.
 - Hi or Lo inputs

HEADLIGHT FLASH

- Dedicated outputs x 2 (with built-in diodes) to control headlights and/or complementary flashing lamps

GATEWAY RADIO CONTROLLER

- Automatically switches between the Main & Gateway Radio (for built-up areas) within a 30 second window for the driver to exit the vehicle
- Automatic handbrake detection

ADDITIONAL FEATURES

- 16 x AND logic modules
- 16 x OR logic modules
- 16 x timer modules

F : Connection and Switch Details

F:1 Power Connections and Outputs

- 16 Outputs**
- Expandable Outputs**
- Headlight Flasher**
- 100 Watt Siren with PA**
- Load Shedding**
- Run Lock**
- Split Charging Logic**
- Installer Programmable**
- LED Diagnostic Panel**
- Can BUS Connection**
- 16 Inputs**
- Handset Options**

F:7 Run Lock

Run Lock

- Outputs - 1 run lock output, additional outputs assigned from software
- Enable inputs - Inputs assigned in software from handset, handbrake, remote buttons etc, high or low inputs
- Reset inputs - Inputs assigned in software from brake light, remote buttons etc, high or low inputs

Run Lock operating parameters can be set-up and defined in the 'Run Lock User Interface Module' that is within the Installer Program - see Section K.

F : Connection and Switch Details

F:8 Split Charging Logic

Split Charge Controller

- Pull in and drop out voltages installer adjustable
- Used to switch in and/or charge secondary battery
- Monitors primary battery voltage
- Output drives charging solenoid
- Solenoid in and out voltage programmable

Voltage levels and timing periods are set-up and defined in the 'Split Charging User Interface Module' that is within the Installer Program - see Section K.

G : Handset and Switch Unit Options

G:1 Universal Multi-Way Switch Units Overview

The range of Universal Multi-Way handsets and switch units are the preferred option for use with the Universal Controller Lite (MCS-16) particularly for new installers.

These units are supplied fully programmed by RSG to the customers specification, see pages 1:16 - 1:23 for individual specification sheets.

Each button can operate independently or in conjunction with other buttons as well as having unique legends and back light colour, therefore each device would need to be uniquely configured.

Alternative PWM handsets/keypads (Bespoke programming required)

Best suited to customers who have a historic preference for a particular type of device. However, some bespoke programming and an alternative adaptor will be required.

Alternative handsets/keypads must be procured and supplied by the customer or their agent.

G : Handset and Switch Unit Options

G:2 Universal Multi-Way Switch Units Description

An extremely versatile range of fully programmable switch units to suit a variety of applications.

Each switch can be independently configured in terms of operation, legend designation and even colour, therefore they are the ideal interface for controlling a variety of vehicle based hazard warning systems including the Universal Controller Plus (MCS-16).

Main Features

- One of the most slimline range of switch units available in the market today
- Meets automotive protrusion regulations
- Fully programmable at source
- Each switch can have a multi-function 'HOT' key action depending on required function
- On handset versions, any switch can be programmed to act as PTT (Push To Talk) when used in conjunction with Public Address (PA) equipment
- Surface/DIN mount units will require a separate hand-held microphone
- Adjacent switches can be combined for extra visual impact
- Interactive keys for interactive lighting functions and audio warnings
- 3 stage back illumination - low brightness when OFF, high brightness when ON and both levels dimmed at night
- Back light colour can be set to suit switch function
- A fully tactile, one piece wipe clean keypad with 'positive clicks'
- Multiple mounting options for each type of switch unit
- Optional Anti-Bacterial finish available

Each switch can operate independently or in conjunction with other switches, as well as having unique legends, therefore each device would need to be uniquely configured. A configuration specification sheet is available which allows you to define the solution required along with the associated switch unit which will depend upon the level of control necessary.

K : Programming the Universal Controller Lite (MCS-16)

K:1 Overview of Programming Requirements

Using the Software and Creating Configuration Files

Details of how to program the full functions of each feature of the Universal Controller Lite (MCS-16) are given in Section 2 of this Guide. However, when reading this section it will be useful to bear in mind that this device is produced exclusively for RSG Engineering Ltd by a company called MHE Electronics and as such the unit is referred to only as the MCS-16.

It should be noted that all software programming to set-up unique 'configuration files' has to be performed exclusively via a PC using the appropriate PC based software that is available separately – part number UNI-PRO-002. Also, please note that in order to use the programming software the PC must be connected to the Universal Controller Plus via a programming cable part number ACC-259.

The programming software comes in the form of a CD that is normally supplied 'Free of Charge' and which also contains instruction for use. Although this software is easy to use by anyone who has the necessary technical skills, some training is advisable in order to obtain the full benefits of this tool. As such RSG can offer training for this facility at its premises that is normally 'free of charge' for main motor dealers and installers. Training can also be arranged on-site at customers premises, however, a nominal charge is normally made for this to cover expenses, unless significant quantities are required over the project lifetime. Although RSG can supply the software CD to suitably qualified persons, it is not normally practical to offer technical support to customers who have not partaken in formal training scheme.

Entering the Universal Controller Plus Programming Mode

Before attempting to perform any detailed programming as described in Section 2, the programming mode of the device must be entered into by following the instructions once the programming CD is loaded onto a PC.

Software Updates

No need to contact RSG for software upgrades as they are available directly on-line:

Manual Downloading Process

By utilising an 'Auto Update' system the latest version of the MCS-16 Configuration Install Files are available online. Therefore whenever a new version of 'MCS-16 Operating Software' is released new 'MCS-16 Configuration Install Files' will simultaneously be released too.

The link to the MCS Configuration Install Files is permanent and is always named the same, regardless of the internal version numbers. The link is available from the RSG Website where the files are stored using the azure online cloud storage system and as such has a permanent and very reliable presence.

www.rsg-ontop.com > [Links](#) > [MCS-32 and MCS-16 Configuration File Update](#)

As such all clients can decide whether to update their system before making any changes to the Configuration Files, by the software feature in the 'help' menu or to the work with the current loaded version. However, if all the latest features of the product are to be active then the latest update 'must' be downloaded. If required the RSG technical department can help with this decision. It is also worth noting that the CD supplied with the device is most likely not to be the latest version due to the time spent in storage before despatch.

6. Special Requirements

Operational Parameter Required	Description of Operation and Comments

If appropriate provide a schematic diagram below of the operational parameters required or submit a separate drawing:

The parameters shown above should be defined by customers requiring RSG to assist with setting up a unique MCS-16 configuration file.

Completed By	Name	Company	Date

K : Programming the Universal Controller Lite (MCS-16)

K:3 Power Distribution

A typical sample of how power may be distributed within the MCS-16 to aid assigning outputs.

K : Programming the Universal Controller Lite (MCS-16)

K:4 User Interface - Handset Type

Following are the initial steps to set-up the MCS-16 and the corresponding handsets, leading on to a typical most complex function. However, as options are so vast and varied we recommend one of our training courses is attended.

Label and enable the system handset and then configure the device as shown in the example below.

Label and Enable

K:5 User Interface - Handset Buttons to MCS-16 Outputs

Set-up as shown in the examples below.

Enable Handset Buttons

Configure Handset Buttons

Label & Enable MCS-16 Outputs

Configure MCS-16 Outputs

K : Programming the Universal Controller Lite (MCS-16)

K:6 User Interface - Interactive Functions within the MCS-16

LOGIC MODULES

Options are so vast and varied it is recommended one of our training courses is attended - contact our sales department for details.

K : Programming the Universal Controller Lite (MCS-16)

K:7 Configuring Multiple Handsets - MCS-T8, MCS-T10, MCS-T16

The Universal Controller Lite (MCS-16) can be controlled by up to 4 Universal Multi-Way handsets. In order for a handset to be used with the MCS-16 it must be given a unique 'identity' on the system.

By default all Universal Multi-Way handsets are supplied as 'Handset 1'. Handsets 2, 3 and 4 must be re-configured.

Therefore, if you wish to use two or more handsets to control the MCS-16 these additional handsets must each be configured with their own 'identity'.

Please note that only MCS-T10 handsets and above are able to be programmed as the fourth handset.

Configuration of the handset is achieved by entering a numerical code using the handset buttons as shown here:

Step 1

- First, you need to orientate the handset so the lead is at the 6 o'clock position.
- Once the handset is in the correct orientation imagine that each row of buttons becomes a number.
- The bottom row of buttons are always row zero (0) regardless of the type of handset, the next row becoming one (1), two (2) and so forth travelling up the handset.

Step 2

- Ensure the MCS-16 is wired and powered up ready to accept the handset(s).
- Simultaneously press and hold down a button on row 0 and row 2.
- Whilst holding these buttons down plug the handset you wish to configure into the MCS-32.

Step 3

- Once the handset is plugged into the MCS-16 release the buttons, the handset buttons will then all be illuminated in blue.
- Now enter the relevant code, one button at a time, using the handset buttons.
- For example **handset 2** would be row 0, row 0, row 2 and row 2.

Handset 1 (default)	0, 0, 2, 1
Handset 2	0, 0, 2, 2
Handset 3	0, 0, 2, 3
Handset 4	0, 0, 2, 4 (MCS-T10 handsets and above only)

Step 4

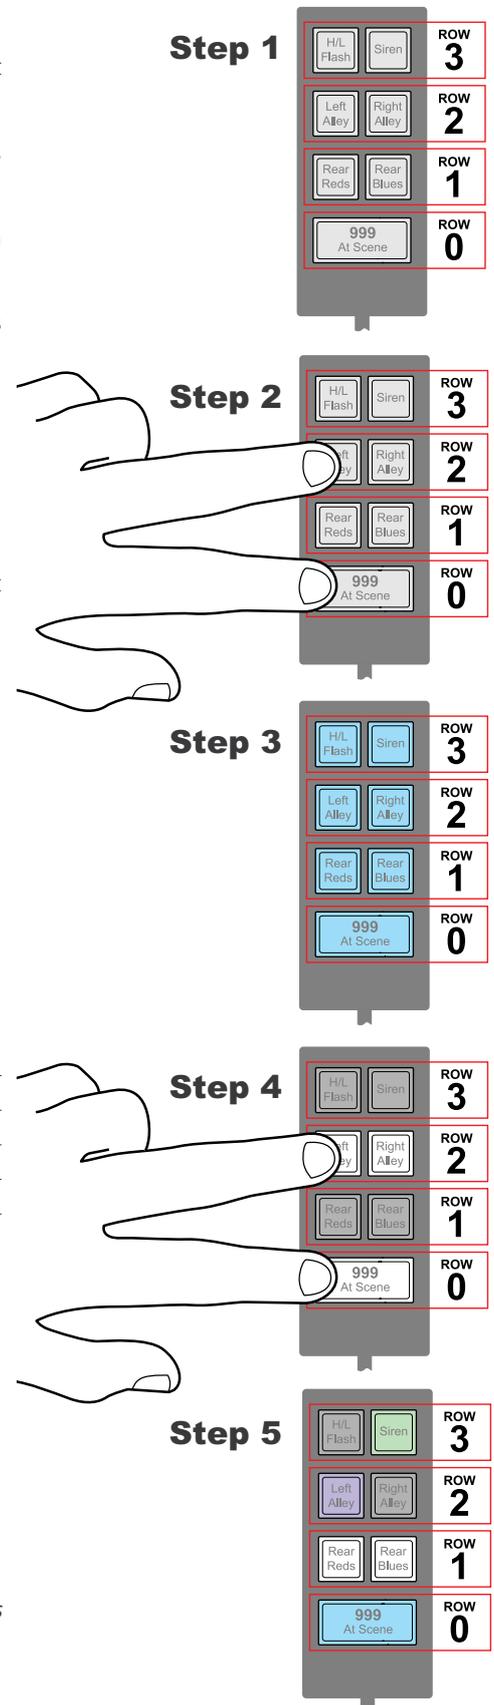

- Once you have entered the desired code row 0 and row 2 will illuminate in white.
- Simultaneously press both illuminated rows, this will save the configuration.

Step 5

- Once the configuration is saved the handset will illuminate as per your configuration within the MCS-16 software.

Note: Each stage may 'time-out' if this happens unplug the handset and start the process again from step 1.

The example below shows the configuration process for adding a second handset

K : Programming the Universal Controller Lite (MCS-16)

K:8 Configuring Multiple Handsets - MCS-T17

The Universal Controller Lite (MCS-16) can be controlled by up to 4 Universal Multi-Way handsets. In order for a handset to be used with the MCS-16 it must be given a unique 'identity' on the system.

By default all Universal Multi-Way handsets are supplied as 'Handset 1'. Handsets 2, 3 and 4 must be re-configured.

Therefore, if you wish to use two or more handsets to control the MCS-16 these additional handsets must each be configured with their own 'identity'.

Please note that only MCS-T10 handsets and above are able to be programmed as the fourth handset.

Configuration of the handset is achieved by entering a numerical code using the handset buttons as shown here:

Step 1

- First, you need to orientate the handset so the lead is at the 6 o'clock position.
- Once the handset is in the correct orientation imagine that each row of buttons becomes a number.
- The bottom row of buttons are always row zero (0) regardless of the type of handset, the next row becoming one (1), two (2) and so forth travelling up the handset.

Step 2

- Ensure the MCS-16 is wired and powered up ready to accept the handset(s).
- Simultaneously press and hold down a button on row 0 and row 1.
- Whilst holding these buttons down plug the handset you wish to configure into the MCS-32.

Step 3

- Once the handset is plugged into the MCS-16 release the buttons, the handset buttons will then all be illuminated in blue.
- Now enter the relevant code, one button at a time, using the handset buttons.
- For example **handset 2** would be row 0, row 0, row 2 and row 2.

Handset 1 (default)	0, 0, 2, 1
Handset 2	0, 0, 2, 2
Handset 3	0, 0, 2, 3
Handset 4	0, 0, 2, 4 (MCS-T10 handsets and above only)

Step 4

- Once you have entered the desired code row 0 and row 1 will illuminate in white.
- Simultaneously press both illuminated rows, this will save the configuration.

Step 5

- Once the configuration is saved the handset will illuminate as per your configuration within the MCS-16 software.

Note: Each stage may 'time-out' if this happens unplug the handset and start the process again from step 1.

The example below shows the configuration process for adding a second handset

5:1	MCS-16 Cables, Connectors & Adaptors	2:45
5:2	Microphone Cables, Connectors & Adaptors	2:45
5:3	Universal Devices Connections, Adaptors & Cables	2:46

1 : Specification

1.1 Absolute Maximum Ratings

- Supply Voltage : 18 Volts DC
- Supply Current : 40 Amps A, B + 20A Primary = 100A Total
- Standby Current : Typical : 55 milliamps (@13.8VDC, no peripherals attached)
Max : 65 milliamps (@13.8VDC, no peripherals attached)
- Standby Temperature : -20 Deg C – 70 Deg C
- Operating Temperature : -20 Deg C – 50 Deg C

1.2 Power

- 2 x 40Amp DC pins on pluggable connector
 - These MUST be fused with 40 Amps fuses
- 1 x Ground / chassis connections
 - If the siren output is going to be used, the ground chassis line should be rated to handle 15 Amps or more
- The Primary Sense line is used to provide power to a single power output.

1.3 Digital Inputs

- 8 x Positive Switched
- 8 x Negative Switched

1.4 Analog Inputs

- Primary battery sense

1.5 Analog Monitoring

- Bank A voltage sense
- Bank B voltage sense
- Internal temperature monitor
- Output channel current monitors
- Siren system current monitor

1.6 Outputs

- 8 x High side current and voltage protected outputs
- 4 x Positive or Negative switching Monitor Control or Outputs - 2.5Amp Max.
- 4 x Positive or Negative switching Monitor Outputs - 0.6Amp Max.
- 100W siren speaker output

1.7 Communication

- 1 x RS485 Communication
- 1 x PWM input.
- 2 x CAN Bus 2.0

2 : Installation Requirements

- 2.1 Both the Bank A and Bank B Supply lines **MUST** be protected with individual 40 Amp fuses, preferably at (or near to) the battery terminal.
- 2.2 If the primary sense input is used, the input **MUST** be protected by a 20 Amp fuse, preferably at (or near) to the primary battery terminal.
- 2.3 **DO NOT** obstruct fan vents along the top, side or under surfaces of the MCS-16. Do not install any equipment on top or underneath the MCS-16.

The above installation requirement must be followed for safe operating and extended product lifetime.

Standby RSG UK Limited Phone: +44 (0)1543 438800 Email: info@standbyrsg.co.uk Web: www.standbyrsg.co.uk

3 : System Description

3.1 Siren System

The siren module supports 100W (8 Ohm or 11 Ohm) output speakers.

Note: RSG 100W Speaker Part Number LSP-210 is 8 Ohms.

Using software, the Siren System can be configured for:

- PTT (Handheld Microphone Broadcast)
- Radio Rebroadcast
- HRT (Horn Ring Transfer) to enable and disable siren tones
 - Single Tap or Double Tap to Start modes
- 4 (Minimum) industry standard siren tones*, playable in any order
 - Wail
 - Yelp
 - Two-Tone
 - Pulsar
- City Mode
- Air Horn
- Test Mode (Low Power output, suitable for in-workshop testing)
- Bench Mode (Uses internal speaker for development testing on the work-bench)

*See Appendix B for the full comprehensive list of siren tones

3.2 High Power Outputs.

There are 8 positive switching outputs. The first 4 channels are banked collectively as Group A, and the second 4 channels are banked collectively as Group B. Group A and Group B can collectively source a maximum of 40 Amps each. Each channel can be programmed with individual over- current and under voltage protection. Channel 4 is sourced from the primary battery input.

Each output is independently capable of switching 20 Amps.

Using Software, the outputs can be configured for:

- Minimum Voltage Dropout. (Disables the output when the supply voltage drops below the set level)
- Maximum Current Protection (Disabled the output when the output current exceeds the set current level for a period of time)
- Output Mode - A selection of flashing patterns is available.
- Enable Inputs
 - Up to 8 positive or 8 negative inputs can be selected to enable (turn on) the output. If ANY of the enable inputs is active, the output can turn on
- Inhibit Inputs
 - Up to 4 inputs can be selected to inhibit the output. If any of the inhibit inputs is active, the output will not be turned on. Inhibits take precedence over Enables.

3 : Sytem Description continued

3.3 Low Power Outputs

There are 8 Negative or Positive switching outputs. 4 are rated as medium power outputs and rated at 2.5Amps and 4 are rated as low power outputs and rated at 0.6Amps. Each channel can be programmed with individual voltage protection. Positive (12V) power is sourced via a set of power diodes from either Bank A or Bank B supply inputs (whichever is higher in voltage).

With the exception of current limiting (there are none for the low power outputs), the features and configuration setup are exactly the same as for the High Power Outputs. See Above for more information.

3.4 RS485 Serial Interface

The MCS-16 currently supports the MHE RS485 remote handheld interface. All communication for programming the unit (either firmware updates or configuration settings) and done using this serial interface.

3.5 CAN Bus Serial Interface

The MCS-16 has two CAN2.0 full speed interfaces. The first interface is designated for local control using suitable MCS compatible remotes, while the second is intended for bespoke vehicle communication. Consult with your installer for more information regarding these options.

3.6 Audio Announcements and Volume Settings

The MCS-16 has an internal speaker amplifier for making announcements to the vehicle occupants.

Please see the Software Modules: Battery Monitoring and Gateway Commander.

To set the volume levels for the MCS-16, follow the following procedure:

- 1 Press and hold the MCS-16 Diagnostic Button on the side of the unit (this is located next to the System Connector)
- 2 While holding the MCS-16 Diagnostic Button, press and release the reset button (this is located just below the diagnostic button).
- 3 After approximately 5 seconds, the MCS-16 will beep once. Release the diagnostic button.
- 4 repeatedly press the diagnostic button to select the volume level required. The selected setting is shown on the diagnostic indicators LED's:
 - 1 Announcement speaker volume level setting.
 - 2 PTT microphone volume level setting.
 - 3 Radio rebroadcast volume level setting.
- 5 Once you have selected the desired volume setting to change, wait for a further 5 seconds. The MCS-16 will beep again, and the top row will show the volume level for the selected setting.
- 6 Press the diagnostic button to increase the volume level, or press and hold to decrease the volume level.

3 : Sytem Description continued

3.7 Diagnostics (Front label LED indicators)

The MCS-16 has 24 diagnostic LED's on the top side of the unit, which can be used to assist the installer in finding faults, etc.

- CAN1 and CAN2
 - a OFF : The respective CAN port is not being used
 - b RED : The respective CAN port has a fault condition
 - c GREEN : The respective CAN port is working correctly
- H/S (Handset)
 - a OFF : The RS485 port is not being used (has not been configured in software)
 - b RED : The RS485 port has not detected a remote handset
 - c GREEN : The RS485 has detected a working handset
- STANDBY
 - a Off : Normal Functioning
 - b SLOW PULSING GREEN : Auto Standby Mode
 - c AMBER : If the Standby Mode is enabled the LED shows amber while the unit is timing down to Standby Mode
 - d PULSING RED : Over temperature
- SIREN
 - a OFF : Siren has not been configured in software
 - b SLOW PULSING GREEN : Siren is in low power standby mode (Not Enabled)
 - c FAST PULSING GREEN : Siren is internally powered and ready to operate
 - d GREEN : Siren Output is operating (speaker is sounding)
 - e RED : Over-Current Safety - Siren System Disabled (Reset Required)
 - f AMBER : Low Voltage Dropout (The siren is disabled because supply is too low)

3 : Sytem Description continued

- O/P and I/P. User Diagnostics.

Pressing the diagnostics button will scroll through several 'pages' of information that are reflected on the 2 groups of LEDs 1 - 8 relating to inputs and outputs. The O/P and I/P LEDs are the key to which page is currently reflected on the LED's.

O/P	I/P	DISPLAY								
OFF	OFF	<p>High Power Outputs. LEDS 1 - 8 display the state of the outputs. The following table defines the state of the output:</p> <table border="1"> <tr> <td>OFF</td> <td>The output is not enabled</td> </tr> <tr> <td>GREEN</td> <td>The output is enabled (this does not show the flash pattern, only that the output is active)</td> </tr> <tr> <td>AMBER</td> <td>The output is enabled, but the supply voltage has dropped below the set level (Voltage Dropout)</td> </tr> <tr> <td>RED</td> <td>The output is disabled because of an excessive current fault</td> </tr> </table>	OFF	The output is not enabled	GREEN	The output is enabled (this does not show the flash pattern, only that the output is active)	AMBER	The output is enabled, but the supply voltage has dropped below the set level (Voltage Dropout)	RED	The output is disabled because of an excessive current fault

4.3 Diode I/O's

4 : Wiring and Connections continued

4.4 Configurable Outputs

PIN	NAME	FUNCTION	CURRENT MAX
BANK A 1 - 8		Configurable Positive or Negative Data & Control Outputs	0.6A Continuous (1A peak) current per switch
BANK B 1 - 8		Configurable Positive or Negative Data & Control Outputs	2.5A

4.5 System Connector

PIN	NAME	FUNCTION
1	Reset	Connect to 12v to reset the MCS-16
2	Standby	When connected to chassis ground, this input places the MCS-16 into a very low power mode. All functionality is suspended.

4.6 Inputs

PIN	NAME	FUNCTION
BANK A 1-8	Positive Inputs	User Defined
BANK B 9-16	Negative Inputs	User Defined

4.7 CAN Bus

PIN	NAME	FUNCTION
1	Remote Power Output	12v Output for CAN Remotes. Protected with a 500mA resettable fuse
2	CAN 1 High	
3	CAN 1 Low	
4	Ground	
5	CAN 2 High	
6	CAN 2 Low	

4 : Wiring and Connections continued

4.8 RS485

1 6

PIN	NAME	FUNCTION		
1 (Left)	Microphone Input			
2	Ground	Common		
3	A	RS485 Data		
4	B	RS485 Data		
5	12VDC	12v Supply	Output	250mA Max
6 (Right)	PTT Sw	PTT Active Low		

4.9 Speaker Outputs

1 4

For connection to Siren Amplifier

PIN	NAME
1 (Left)	11 Ohm Speaker
2	11 Ohm Speaker
3	8 Ohm Speaker - typically to RSG 8 Ohm speaker - part number LSP-210
4 (Right)	8 Ohm Speaker - typically to RSG 8 Ohm speaker - part number LSP-210

5 : Device Connections

5:1 MCS-16 Cables, Connectors and Adaptors

Cables and connectors that are supplied with the MCS-16 and are available to purchase as a spare complete kit or as individual items.

**6M CROSS OVER
EXTENSION CABLE**
REPLACEMENT PART NUMBER:
19-1346

**CAN AUDIO
SPLITTER ADAPTOR**
REPLACEMENT PART NUMBER:
19-1396

**CROSS OVER CABLE
EXTENSION ADAPTOR**
REPLACEMENT PART NUMBER:
19-1389

**CONNECTORS
AND PIN PACK**
REPLACEMENT PART NUMBER:
22-1584

5:2 Cables, Connectors and Adaptors to Connect Microphone to MCS-16

Cables, connectors and adaptors supplied with the Universal Microphone and are available to purchase as spare parts.

HAND HELD MICROPHONE WITH PRE AMP
REPLACEMENT PART NUMBER: UNI-MIC-005

IN-LINE JOINING PIECE
REPLACEMENT PART NUMBER: 19-1389

MICROPHONE CLIP KIT
REPLACEMENT PART NUMBER: ACC-242

MCS-16 'Y' SPLITTER
Links Microphone, handset and MCS-16
REPLACEMENT PART NUMBER: ACC-236

5 : Device Connections continued

5:3 Universal Devices Connections, Adaptors and Cables

Connectors and Pins compatible with MCS-16

Universal Controller Lite (MCS-16) Devices UNI-LIT-001				
Connector Kit - MCS-16	Description	RSG Part Number	Farnell Part Number	Quantity
Part Connector Set Item Code 2011277	Pins and Plugs Only	22-1584	N/A	1
High & Low Power Outputs	10-way Housing Crimp Socket	22-1582	N/A	2
		11-1583	N/A	10
Siren Speaker	4-way Housing Crimp Pin	22-1409	3422549	1
		22-1423	285-389	2
Power	4-way Housing 10 AWG Crimp Socket	22-1516	307-5801	1
		22-1449	973-3132	4
System	2-way Housing 22-18 AWG Crimp Socket	22-1046	151-866	1
		22-1421	811-6067	2
CAN Bus Cable	CAN Audio Splitter	19-1396	N/A	1
Inputs	16-way Housing 22-18 AWG Crimp Socket	22-1411	N/A	1
		22-1421	N/A	16

Microphones for use with MCS-16 Devices

General Description and Application	Item Code	RSG Part Number
MCS-16 Microphone with pre-amp	2011274	UNI-MIC-005
Microphone mounting kit - dash half - spare	Clip Bracket	13-1250
Microphone mounting clip - all types - spare	2011287	ACC-242

Programming Items for use with MCS-16 Devices

MCS-16 Device and Part Number	Item Description	Item Part Number	Quantity
Universal Controller Lite (MCS-16) - UNI-LIT-001	Programming CD Only (MCS-16)	UNI-PRO-002	1
	Programming Lead Only (MCS-16)	ACC-237	1
	Programming Lead and CD (MCS-16)	ACC-256	1

5 : Device Connections continued

Adaptors for use with MCS Devices

General Description and Application	Item Part Number	RSG Part Number
Adaptor - Use with 2 x Switch Units or 1x Microphone and 1 x Switch Unit	2011269	ACC-236
CAN Fan Out Adaptor - RJ Socket to 6-way Molex	2011048	ACC-282
CAN Adaptor - RJ Socket to 6-way Male to 6-way Female Molex	2013007	ACC-284
CAN 'T' Adaptor - MCS-5E 2-way to 6-way Female Molex	2013003	ACC-278
Adaptor for CAN Handsets + MCS-16/MCS-5E + Microphone	2011040	19-1389
CAN/Audio Splitter (supplied with MCS-16)	2011257	19-1396
Hub - Handset Adaptor	2015002	19-1447
MCS & CVS to PWM Handset Adaptor	2011016	22-1468
CAN Handset/Microphone/RS485 Splitter Adaptor	2013051	ACC-309
Siren Reduction (from 100 to 60 watts) Transformer for all MCS-16 Sirens	2013055	ACC-308

Cables for use with MCS Devices

General Description and Application	Item Code	RSG Part Number
0.2m Cross Over Cable use with ACC-236 Adaptor	RSG Part Number	19-1393
1.5m Cross Over Cable General System Extension	RSG Part Number	19-1388
2.0m Cross Over Cable Microphone or Switch Unit Extension for MCS-16	2011039	19-1394
6.0m Cross Over Cable as supplied with MCS-16	2011017	19-1346

Sundry items for use with MCS Devices

General Description and Application	Item Code	RSG Part Number
Molex Crimp Tool 16 to 24 AWG	RSG Part Number	45-1005
Extraction Tool for Molex Crimp Terminals	RSG Part Number	45-1006
Midi Handset (T10) Rubber Surround - Spare	2011232-QFT	ACC-316
Midi Handset (T10) Quick Fit Rubber Shroud - Spare	2011232-SHD	ACC-325
Handset Hub	MCS-MHH MCS-16M	ACC-327
