# ABOUT US

---

## **Standby - Special Signal Technology "Made in Germany"**

We develop, manufacture and sell alarm and warning equipment for emergency, work and special vehicles. We do our best every day to ensure that emergency services reach their destination safely. Standby supports you with unique and innovative special signal technology, which ensures one thing above all: to be seen and heard! The fully digital and modularly expandable software can be individually configured to your requirements and can also be reached via a unique remote maintenance service. This means updates, troubleshooting and configurations can be carried out without the presence of a technician, which means significant time and money savings. Reduce the risk of accidents and the downtime of vehicles and crew with the appropriate special signaling technology from Standby and also benefit from our own production with a central warehouse and fast spare parts supply.

Standby currently employs around 170 people in five European countries. Our employees are experts in research and development, manufacturing, shipping and logistics, as well as technical support and sales. This allows us to guarantee the best support and outstanding service for our customers throughout Europe.

We are constantly working to improve ourselves and our products. The focus of these developments is above all safety through better visibility of emergency vehicles on emergency trips. In addition, we rely on the simple installation of our technology and on a simple operating philosophy of our special signal systems designed for the driver.

What sets us apart is the ability to localize errors and carry out updates and configurations via remote maintenance. This quick error detection and correction in connection with our central warehouse leads to a significant reduction in downtime for emergency vehicles..

**Standby is your reliable partner for all BOS, including fire brigades,  
Rescue services, police and all body manufacturers.**

# Production „Made in Germany“

Standby GmbH relies on flexible, customer-oriented production at the Dinslaken location.

“Made in Germany” is our program.

Individual customer production as well as project-related series production takes place in modern, flexible production lines, so that quality can be ensured at any time and short-term adjustments can take place.

Standby GmbH has been ISO 14001:2015 certified since 2020; We always focus on environmental prediction and sustainability!

Standby GmbH is ISO 9001:2015 certified and uses procedures for checking product conformity in accordance with the requirements of StVZO §22, EC Directive 27/245 / EEC, and UN regulation No. 10 and No. 65.

Training, instruction, as well as further education and training of our employees continue to contribute to a constant quality.

Our in-house development team is constantly working on new, innovative solutions in order to keep our products up to date with the latest technology and to make the application as intuitive and easy as possible for you.

**Lightbars**

# Lightbar W3

The lightbar W3 is manufactured and programmed by hand in Dinslaken according to your wishes.

## Product features:

- **Aerodynamic design with the lowest air resistance (Cd value), therefore extremely low noise level**
- **Main beacon in different flash modes**
- **StVZO-approved indicators to the front and/or to the rear**
- **Rear warning systems in various designs**
- **High power front flash**
- **Alley lights as standard, radiation 0° or 15° downwards**
- **Instead of the alley lights, a command light in red or green can be installed.**
- **Work lights to the front and/or to the rear. The brightness and the shape of the lenses can be configured according to customer requirements.**
- **LED command light**
- **Light sensor for automatic day / night shift**
- **"Flasher Red" to support the police stopping process**
- **Blue light extension front and rear**
- **Additional amber rotating beacon**
- **Charge light to indicate that the vehicle is connected to the charging station**
- **Martin sound radiators on the roof**
- **Loudspeaker on the underside of the bar**

When it comes to designing the software, we also offer you numerous options:

- **Control via our bus system, self-service bus, CANOpen (CiA447), Inomatic, EDSC or also in parallel**
- **Design of the lightning pattern**
- **Night reduction in rotating light mode**
- **Personal configuration of the functional processes and priorities**
- **Column circuit**
- **and much more**

# Lightbar VEGA FX mini with German DIN-Signal

There is no quicker, easier and less complicated way to set up your emergency vehicle.

The VEGA FX combines the light approval according to ECE R65 TB2 and the sound approval according to §22a StVZO in a flat light bar.

It doesn't matter whether you plan to use the magnetically held VEGA FX mini variant or the fixed structure, the system is set up and ready for operation in no time at all.

The double speaker system emits the special signal with up to 117 dB(A).

Optional headlight modules on the side enable the area next to the vehicle to be illuminated, be it to look for house numbers or to secure the scene.

## Product features:

- **Easy construction**
- **No additional installation of control units and speakers required**
- **Flat light bar, height: 67 mm**
- **Aerodynamic**
- **Light approved according to ECE R65 class 2**
- **German signal approved according to §22a StVZO**
- **12/24V capable**
- **Solid aluminum base**
- **Polycarbonate cladding**

# Lightbar VEGA gelb

Protect yourself and your work area with quality products.

Manufactured from a combination of high-quality materials, the VEGA lightbar impresses with its good price-performance ratio.

There are 3 different lengths to choose from for permanent installation on your vehicle, we also offer the VEGA mini as a magnet variant (e.g. for your leasing vehicle).

## Product features:

- **Extremely flat lightbar, only 67mm high**
- **Aerodynamic**
- **Robust aluminium housing and polycarbonate domes**
- **High-performance LEDs, approved acc. to ECE R65**
- **Very low power consumption**
- **Including mounting bracket with inclination compensation**
- **Including 4 meter connection cable**

# LED-Flasher L54

The redesigned L54 front flash has been specially developed for installation locations with limited installation space and sets new standards in terms of efficiency and functionality. With its extremely flat design, it enables discreet installation without compromising on light output. Here is an overview of the outstanding features:

Despite its compact size, the L54 ensures an impressive light output. It is approved according to ECE R65 class 2, which guarantees the highest safety standards.

Depending on the space available in the vehicle, the L54 is available as a single module with a solo driver or as a double module with a twin driver. These customization options enable optimum integration into different vehicle types.

The L54 is suitable for operation at 12 or 24 V, which enables a wide range of applications. Different flash modes can be set as required to ensure optimum signaling.

## Product features:

- High light output in the smallest installation space
- Suitable for 12 / 24 V
- Various flash modes can be set
- Daytime approval according to ECE R65 class 2 (smoked version class 1)
- Up to 10 modules can be synchronized

# LED-Flasher L56 2C

The L56 2C is the result of consistent further development of the L52 2C. The areas of application and the dimensions of the popular L76 were adopted. In this way, the advantages of both speed cameras are combined in a new module.

The L56 2C has the latest LED technology for powerful light. It has an integrated driver unit that reduces the space required to a minimum. A new, coated double lens system, which enables high performance, rounds off the well-thought-out design.

The L56 2C is available in many different color combinations, so that it can be used in a variety of ways. There are versions with blue and amber warning lights combined with white work lights, direction indicators or two-color work lights for even more performance.

The L56 2C are specially designed for vehicles that require a larger light distribution and a larger lamp size. It is easy to install and can be mounted almost anywhere on the vehicle.

## Product features:

- **Very powerful two-colour warning light**
- **Multiple light patterns and combinations**
- **Robust and slim design**
- **Coated double lenses**
- **Same size as L76**
- **Easy to assemble**
- **Developed in Sweden**
- **Approved according to ECE R65 class 2 and ECE R10 (EMC)**
- **Protection Class: IP67**

# LED-Flasher L88

## You won't be overlooked with the L88 directional LED flash!

The small, robust flasher warns vehicles driving ahead or behind from a distance and helps to increase safety on the road.

Whether as a front flash, rear flash or rear warning system; the L88 is always the right choice. Installation in the vehicle is very easy thanks to the compact dimensions. Only one hole is required for assembly, no further openings and no screw material are required. A GORE-TEX membrane on the Blitzer top wicks away moisture and provides air exchange to prevent condensation as much as possible.

Thanks to its Class 2 approval according to ECE R65, Category X, the L88 is clearly visible even in bright sunlight. At night, the brightness can be reduced to Class 1 so as not to dazzle other road users. Thanks to the separate driver module, which controls the LED modules, installation is universally possible.

### Product features:

- 12/24 V capable
- Available in blue and amber
- Diameter: only 29 mm
- Installation depth: only 24 mm
- High quality materials, UV stable
- GORE-TEX membrane for the disposal of moisture
- Available as a SOLO or TWIN variant
- Very short assembly times, without screws
- Also approved in amber as direction indicators and hazard lights
- Day approval according to ECE R65 class 2 (tinted version class 1)

# LED-Flasher L52 / L52 2C

The L52 offers you an extremely flat design in addition with an enormous luminosity. With a wide range of technical options and the associated approvals, this LED unit offers you significantly more options than the simple basic function of an LED flasher.

In addition to the classic front and rear flashing variant, the L52 can also be used as work lights, indicators, brake and position lights and as a side marker light. The two colours of the L52 2C model result in a wealth of additional application options.

## Product features:

- **Approved as:**
  - **Directional beacon (front or rear flash / blue light extension)**
  - **Rear warning system indicator**
  - **Brake light**
  - **Position light**
- **Total installation height of 9mm, including the driver**
- **Available in one or two colours; combine, for example, an RWS system with a blue light extension or a headlight in one module.**
- **Can be used flashing and / or statically**
- **Synchronizable**
- **Programmable (choose between synchronous, alternating, lightning pattern, etc.)**
- **Available in 5 colours (blue, yellow, red, white, green)**
- **2 versions for shoring (horizontal or vertical)**
- **Suitable for 12/24 V.**

# Rear-Warning-System RWL 52

The RWL 52 rear warning bar is intended for installation on the rear of the vehicle and offers numerous variation options.

Developed as a warning system, the RWL 52 warns incoming traffic of danger spots at an early stage.

By using the L52 2C modules, the RWL 52 can also be used in combination as a blue light extension.

Direction indicators and / or brake lights are just as possible as the integration of white modules as work lights.

## Product features:

- **Easy construction**
- **12/24 V capable**
- **Variable length and equipment 160... 2536 mm in 113 mm steps. Other lengths on request**
- **Proven LED modules L52**
- **Vehicle-specific inclination can be adjusted so that the radiation is parallel to the road**
- **Robust design in powder-coated aluminum profile**
- **Construction horizontally or vertically**

# Rear-Warning-System MTD

The rear warning bar MTD is intended for installation on the rear of the vehicle. It warns incoming traffic early on of danger spots or redirects traffic in the desired direction.

The housing consists of a high-quality extruded aluminum profile and is therefore very robust and durable.

## Product features:

- Can be quickly converted from a built-on version to a built-on version
- 12/24 V capable
- 3 lengths: 680, 800 and 1030 mm
- 8 different light modes can be controlled, such as:
  - Warning system
  - Running light from right to left
  - Running light from left to right
  - Running light from the center outwards
  - Night reduction
- No additional control unit is required

# Integrated LED-Modules L51

Our L51 modules offer you the option of an individual solution for your vehicle warning system.

In close cooperation with our development team, we can implement a compact, cost-efficient and, last but not least, high-quality solution for you.

Blue light, high-performance front flash, turn signals, position and brake light, rear warning system and work lights in various inclinations are just a few of the numerous possibilities that you can implement with our modules.

We manufacture our L51 modules with different colors, lenses and inclinations. The light intensity of the modules can be adjusted individually.

We would be happy to support you in planning, implementing and obtaining approvals for your integrated warning system.

On request, we can also supply you with the right control; Integration into your existing system is also possible.

If you are interested in planning an integrated warning system, simply make an appointment with our sales force. He will advise you extensively together with our development department.

## Product features:

- State-of-the-art high-performance LEDs
- Optimized product for integrated lighting solutions
- available in different colors
- Bracket for easier assembly
- Low power consumption
- ECE R 65 class 1 and 2 (depending on configuration)
- EMC tested
- Long life span
- Flexible assembly options

# **STANDBY®**

When attention matters.

## **Public-Safety-Systems**

# Siren Amplifier and Control Unit MS-350

## One device for all requirements.

The MS-350 is a combination of a public safety system and a control unit. You determine whether the system is controlled digitally and/or in parallel ("analogue"), which warning signals the device should emit and how the levels of the three AF lines are set (e.g. for microphone, tape or radio switching).

Load relays are a thing of the past. Our control unit provides you with 2x 6 A and 4x 2 A outputs. If these outputs are not sufficient for you, we can expand the outputs with an additional I/O box (SE05).

## Product features:

- Can be configured individually according to customer specifications
- 2 speaker outputs for a sound pressure of up to 121 dB (A) in a low-reflection room
- Up to 14 control inputs
- Up to 6 switching outputs (2x 6A, 4x 3A)
- Evaluation of pulse width and pulse frequency modulation signals (e.g. speed signal)

- 3 configurable audio inputs for microphone, radio, tape etc.
- Remote maintenance option

## 2 CAN interfaces:

- 1x CANopen, FireCAN
- 1x standby own CAN connection

Mounting sample

Mounting sample

# Siren Amplifier and Control Unit MS-350

Basically, the control unit is configured according to your wishes. We implement your logical processes and functions and configure the inputs and/or outputs according to your ideas. You do not need any feedback from the warning light itself to monitor simple warning lights. The MS-350 can monitor and evaluate the load output. Even clocked speed signals can be evaluated and processed by the MS-350.

In addition to our Standby CAN bus, the MS-350 can of course also operate other BUS systems (CiA447, FireCAN, etc.). In addition, there is also the possibility of direct implementation with different bus systems (CAN gateway).

The MS-350 emits the warning signal at up to 123 dB(A), making it one of the loudest systems on the market; a good prerequisite for the safety of the emergency personnel and other road users!

In addition, with this device we also offer you the possibility of remote maintenance by our development or our service in order to be able to quickly and easily install software updates or adjustments or to find and eliminate the cause in the event of an error.

## Usable with:

- **Parallel ("analog") control**
- **Bus control units**  
(e.g. BT-H 100, BT-C 121 / 200, BT-210/220, BT-2004 / 2008 / 2017 etc.)
- **External control electronics (ZE) as a special signal system, expansion of the switching inputs / outputs, voice amplifiers, etc.**

## Warning signals:

- **For the countries D, NL, S, F, A, CH, F, I, US**
- **Electronic compressor signal**
- **City / country switching**
- **YELP Signal for the stopping process**

## MS-350 special functions

In addition to the free assignment of the load outputs and the control inputs, there are special functions that can be taken over by the MS-350.

Below are two examples of special functions that are possible:

### undervoltage detection

(only in connection with a BT-H 100)

- Free specification of the notification or switch-off thresholds
- Acoustic notification in case of undervoltage
- Visual notification via the BT-H 100 display
- Deactivation of under-priority functions in the event of undervoltage

### Radio main switch, activation / deactivation of the digital radio

- Version with one output: A time relay has yet to be installed

- Version with two outputs:

- Output 1: activation/deactivation
- Output 2: Shutdown after a specified time (digital radio logout)
- The time for switching off output 2 can be specified by the customer

## TECHNICAL DATA

operating voltage	12 / 24 VDC (9 ... 14.4 / 21.6 ... 28.8 VDC)
current consumption	< 5 A in operation (without beacons) < 0.5 mA in standby mode
ambient temperature	-25 ... +70 °C
- operating	-40 ... +85 °C
- storage / transport	
output power acoustic	12V: 2 x 50 W (120 W max.) 24V: 2 x 80 W (200 W max.)
dimensions	44.6 x 136.6 x 131.0 mm
weight	approx. 400 g
protection class	IP 54
inputs	13x < 20 mA (plus active) 1x < 20 mA (minus active)
outputs	2x < 6 A 4x < 3 A (these outputs can also be used as inputs)
approvals	W25050 (acoustic) E1-047152 (EMC) approved with: • 1 or 2x K-SR 350 (12/24V) • 1 or 2x LAD 334 / 335 (24V) • TOPas / Z2-lightbar

# Speaker K-SR 350

The small speaker K-SR 350 for remote installation.

## Product features:

- 2 versions for 12 V and 24 V.
- Can be used individually but also in pairs in conjunction with the MS 350
- Small dimensions
- Universally installable
- Up to 121 dB (A) with the MS-350 and use of 2 speakers

# Speaker LAD 334 / 335

The speakers LAD 334/335 are suitable for mounting on large vehicles. The large funnels and extra strong pressure chamber systems ensure a high level of efficiency, both for clear and penetrating special signals and for voice announcements.

## Product features:

- For 24V vehicles
- Possible equipment on the vehicle:
  - 2 x LAD 334
  - 1 or 2 x LAD 335
- Paintable

**Beacons**

# Half Beacon L104

The half beacon L104 supports or replaces the main beacon (s) on the front of the vehicle and / or on the rear of the vehicle.

With the L104 + L52 version, an additional front / rear flash is integrated in the housing.

**Product features:**

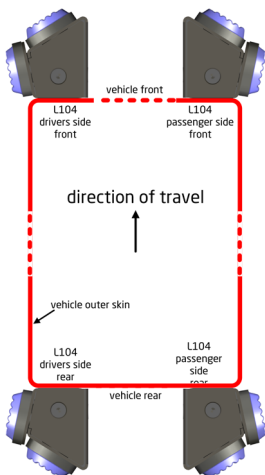

- 4 available variants
- Also for retrofitting on existing vehicles
- 2 or 4 modules per vehicle possible
- Can also be used in conjunction with a light bar or integrated beacons
- Can be combined with the Kreuzungsblitz®
- Approval according to ECE R65 "HTB 2"

# Half-Beacon - Kreuzungsblitz® KBx HTA2/HTB1

The half-beacon Kreuzungsblitz® is used to warn road users when the vehicle is driving out of an area that is difficult to see, e.g. intersection areas where the side view of other road users is not given or restricted, gate exits, covered access routes, etc.

The half beacon enables road users to perceive emergency vehicles as quickly as possible, despite temporarily restricted visibility of the main beacon. Early awareness reduces the risk of accidents and in situations involving road users with emergency services, especially in urban traffic areas.

## Product features:

- Half beacon integrated in the bumper / radiator grille, approved according to ECE R65 HTB-1 or HTA-2.
- The impact protection remains unaffected by the embedded LED modules.
- A total of 4 different basic variants ensure that they can be installed on every type of vehicle.
- The basic variants differ in the front-facing LED modules
- Possible equipment variants: L88, L54, L52, L52 vertical
- Corresponding vehicle-specific brackets are available separately

# Half-Beacon - Kreuzungsblitz® KBx HTA2/HTB1

We offer tailor-made mounting systems and suitable drilling templates for the following vehicle types:

- **MB Sprinter from 2018**  
(possible colors of the recessed shells: white or black)
- **VW Crafter**  
(possible colors of the recessed shells: white or black)
- **MB Vito from 2014**  
(possible colors of the built-in shells: silver, white or black)
- **Ford S-MAX**  
(possible colors of the built-in shells: silver or black)
- **Further mounting systems for series on request**

# Half-Beacon - Kreuzungsblitz® KBx HTA2/HTB1

If you cannot find a suitable installation location for your vehicle type and the 10 ° universal shells to achieve the required beam angle, please contact our sales force.

In general, we can manufacture the trays for you from 0 ° - 20 ° using the 3-D printing process.

In addition, we can also use many shells from our vehicle-specific offers for other vehicle types. Our field service will be happy to help you with the planning.

# Beacon RHODON

Compact beacon with the highest warning effect, so that you can safely reach your place of use.

Due to the different designs, the RHODON offers a wide variety of mounting options.

Due to the combination of low weight and compact design, the RHODON, as a magnetic beacon, guarantees safe handling in the event of an emergency.

## Product features:

- Highest light output in the most compact installation space
- Light intensity: 325 cd
- Magnet design approved up to 320 km / h
- Day approval according to ECE R65 class 2
- Also available as an infrared version (helicopter locator lighting)
- Robust and strong in design

# Beacon B2 RHODON max

The B2 RHODON max Basic is designed for installation on large vehicles. It offers a large illuminated area and can therefore be easily recognized from a distance, despite the high installation location.

Whether single, double, triple or quad flash, the area of application is flexible and the flash pattern can be set according to customer specifications.

All lightning patterns are approved according to ECE R65 TB2.

Several B2 RHODON max Basic can be synchronized.

## Product features:

- Easy construction
- 36 high-performance LEDs
- 12/24 V capable
- Day / night approval (class 2)
- Single, double, triple and quadruple flash adjustable
- Fastening in accordance with DIN14620, "B2" 200 bolt circle using 3 screws in a 120 ° arrangement
- Function control output
- Can be synchronized with other beacons
- Approved according to ECE R65 TB2

# Beacon GyroLED M80

The luminaire for a wide variety of uses and requirements.

Flash pattern: rotating light (slow / fast), flash mode (double flash / triple flash / column function or EASA mode).

Even after the GyroLED M80 has been set up, the functions can be selected individually on the vehicle. The setting is made with a commercially available magnet.

## Product features:

- Approval according to ECE R65 class 1
- 13 adjustable flash modes
- Housing made of polycarbonate
- 130 bolt circle
- Reverse polarity protection
- Also available as a magnet version (DEKRA-tested up to 260 km/h)
- Robust and durable

# Beacon GyroLED M130

The GyroLED M130 can be used very flexibly as a light for a wide variety of requirements.

Whether rotating light (slow / fast), flash mode (double flash / triple flash / column function or EASA mode).

The function can be selected individually on the vehicle, even after the GyroLED M130 has been set up. The setting is made via a special "setup line".

## Product features:

- Day approval according to ECE R65 class 2 (blue / amber)
- 13 adjustable flash modes
- Housing made of polycarbonate
- LED pointing upwards for detection from the air
- 130/167 bolt circle
- Reverse polarity protection
- Also available as a magnet version
- Robust and durable

# Beacon GyroLED class 1

The GyroLED Class 1 is the ultimate solution for your needs. This robust rotating beacon not only offers safe use, but also unsurpassed reliability. Available in rotating or flashing versions, it allows flexible adaptation to your requirements. Thanks to ISO fixed mounting, you can rely on this beacon to stay firmly in place, even in the most adverse conditions. It is also available in magnetic or clip-on versions to ensure quick and easy installation. Rely on the GyroLED Class 1 to ensure your safety wherever you are. # Beacon GyroLED class 1 with suction cup

The GyroLED class 1 with suction cup enables the temporary use of a beacon on the vehicle. After it has been put on, the lever generates a vacuum (up to 500 N), which holds the beacon firmly on the vehicle roof. This makes it possible to put it on quickly and safely.

It is available as a rotating or flashing beacon in various colors.

## Product features:

- Housing made of polycarbonate
- 12/24 V capable
- Rotating or double flash
- Colors: blue, amber, red, green, clear
- Quick and safe installation
- Increased suction power through negative pressure (up to 500 N)
- usable up to 260 km/h

# Control Panel BT-H 100

The handheld panel BT-H 100 combines the operation of the special signal system as well as the voice announcement via the integrated microphone on the loudspeaker of the special signal system.

## Product features:

- **CANopen 447, roofbar controller compatible, other CAN protocols on request, standby own bus**
- **9 programmable shortcut keys**
- **2 menu buttons with additional rocker switch for quick navigation in the display menu**
- **Large illuminated buttons for quick and safe operation, even during the night**
- **Large backlit LCD display**
- **4 multicolored status LEDs, function programmable**
- **Cockpit bracket with magnetic attachment; universally mountable on the dashboard**
- **Sits comfortably in the hand, quick and easy operation for driver and front passenger**
- **Voice announcement option through integrated microphone with PTT button on the right-hand side**

Available keycaps  
(will be extended if required)

# Control Panel BT-CH / BT-CH2

The versatile options of the BT-CH and BT-CH2 cupholder control panels - the perfect solutions for individual control in your vehicle. Thanks to an extensive selection of backlit button caps, you can not only choose your own personal design, but also adapt the functions to your specific application.

The cupholder controls are particularly suitable for concealed installation or situations where installation space is limited. Their unobtrusive integration allows them to blend seamlessly into your vehicle without detracting from its aesthetic appearance.

The customizability of the functions allows you to configure the buttons according to your individual requirements. Whether used as a stand-alone system or in conjunction with the MS-350 to control the lightbar, the cupholder controls offer a flexible solution for different operating requirements.

The backlit keycaps not only improve the aesthetics, but also the operability in poor lighting conditions.

Experience a new dimension in vehicle operation with the BT-CH and BT-CH2 cupholder control panels - for individual, unobtrusive control in line with your needs.

### Product features:

- **9 programmable backlit buttons for quick and safe operation, even at night**
- **Installation in the cup holder device**
- **Ideal for concealed installation**
- **Control via CAN bus**
- **12V capable**

Available keycaps  
(will be extended if required)

Approval	ECE R10

# Control Panel H1 Handy-Button

The H1 handy button guarantees that your most important functions can be activated without taking your eyes off the road. A robust structure and a switching unit consisting of several parallel controlled buttons guarantee a function with every actuation and in every situation.

Switch on the blue light with the H1 handy button, then activate the special signal or switch between city and country signals when the blue light is activated. The selected function is optically displayed via an RGB LED in the front of the housing and also serves as lighting for finding in the dark.

The H1 handy button is programmed according to your ideas and can be positioned anywhere in your vehicle.

## Product features:

- **CAN bus control unit**
- **Programmable key**
- **Programmable RGB-LED for function display and lighting for location**
- **Robust overall structure**
- **Compact dimensions**

# Control Panel Touchpanel T4

The T4 touch panel redefines the standards for the control of special vehicles by taking into account all requirements for use, safety and functionality. This proprietary panel has been specially developed to meet the highest demands. Here are some outstanding features:

The T4 touch panel adapts flexibly to different vehicle types and offers maximum application possibilities with its 4-inch screen. The clear symbols make operation easier and can be adapted to the customer's individual requirements, which is particularly advantageous when producing smaller quantities of vehicles.

The screen is equipped with an overlay that not only makes the correct button easily recognizable, but also increases safety while driving. The clear symbols and user-friendly interface make the T4 touch panel an indispensable element in vehicles.

With its high IP protection rating, the touch panel is fully wipeable and can even be used in demanding, humid environments. The rounded edges meet crash requirements and ensure safety in the driver's environment. Tested to ECE R10 and approved to the highest safety standards.

The T4 complies with sustainability and environmental standards in accordance with GMW3127. This ensures not only the functionality but also the ecological compatibility of the product.

The T4 touch panel is the ideal solution for emergency and special vehicles where the highest demands are placed on use, reliability and function. Rely on the innovative technology of the T4 touch panel to optimize your driving experience.

## Product features:

- Flexibility to change symbols
- Rounded edges to withstand impacts in the event of a collision
- Simultaneous use of two panels in one system possible
- Approved according to ECE R10 and IP65

approval	according ECE R10

# Control Panel Panel P4

The P4 panel is a completely new keypad that highlights the most important functions in on-call duty. The buttons have been integrated into a small housing to fit more easily into the driver's environment.

The panel is connected to our standby systems via CAN bus and has backlit buttons and multi-colour diodes for easy visibility in the dark. It also has a light sensor that regulates the brightness of the panel to a comfortable level that is not perceived as annoying.

Our focus is always user safety and with its manageable size it should be able to be placed close to the steering wheel to minimize the driver's focus on the road. The icons we offer are the siren/blue light, blue light, stop function and on/off for the system, however this can be adjusted to suit the needs of larger fleets.

The design is adapted to the crash requirements in the vehicle environment; the attachment points on the back allow different mounting locations depending on the vehicle environment.

Area of application: Police and other emergency vehicles that place very high demands on safety, ergonomics and quality.

The panel is available in two versions:

- a version with four buttons (P4)
- a version with three buttons and a rotary pushbutton (P4S)

## Product features:

- **Clear buttons that allow the driver to focus on driving and not take their eyes off the road**
- **Indicator LEDs and backlit buttons that make it easier to use in the dark**
- **Ergonomically designed panel with a premium feel**
- **Programmable CAN panel that can be customized to the user's needs**

# Searchlight ASWmove

The ASWmove searchlight is minimal due to its low height and allows the entire area to be illuminated.

If the ASWmove is mounted on a light bar and it shines to the left or right, the alley lights in the light bar are automatically switched on to further increase the illumination.

The ASWmove searchlight is controlled via the BT-H 100, the P4 panel or via the CAN bus. After switching off, it automatically returns to the "0" position.

## Product features:

- **Low installation height**
- **Automatically move to the "0" position after switching off**
- **Automatic switching on of the Alley Light in the light bar when reaching the "blind" area**
- **Control via BT-H 100, Panel P4 or CAN bus**

# Headlight HALO 31 LED 40"

The Vision X XPL Halo is a performance giant with a single row of powerful 5 watt CREE LEDs, similar to the PX ramp. But the difference lies in the eye-catching halo lighting effect that surrounds the reflectors, providing added visual appeal.

New and improved in a curved design, the XPL Halo now better matches the shape of modern vehicles. This design distributes the light slightly wider and is particularly useful for driving on winding roads as it provides improved illumination.

With a robust aluminum/composite housing, the XPL Halo is designed for durability. The unbreakable polycarbonate lens and moisture-resistant pressure relief valve ensure a long service life, while the robust construction can withstand vibrations up to 15.6 grams.

Not only that, but the XPL Halo has additional features such as a built-in EMC interference filter to prevent interference with the vehicle's electronic systems. The active temperature control with Prime Drive and ETM ensures efficient performance in a wide temperature range from -40 °C to +80 °C.

Certified according to CE and RoHS, as well as waterproof according to IP68/IP69K, the XPL Halo shows its capabilities under extreme conditions. The color temperature of 6000 Kelvin provides a clear, bright light, while the temperature test shows that it can withstand extreme temperatures.

Relay cabling is included for easy installation, as are the side wing brackets. Additionally, the halo effect is available on a separate cable to add a personalized touch to your vehicles.

## Product features:

- **Robust aluminum/composite housing**
- **Unbreakable polycarbonate lens**
- **Moisture resistant pressure relief valve**
- **Robust construction - withstands vibrations up to 15.6 Grms**
- **Built-in EMC interference filter (CISPR 25) - does not interfere with the vehicle's electronic systems**
- **Active temperature control with Prime Drive and ETMCE-approved, RoHS-certified**
- **Waterproof IP68/IP69K Color temperature 6000 Kelvin**
- **Temperature tested from -40 °C to +80 °C**
- **Relay cabling included in the scope of delivery**
- **Side wing brackets included in the scope of delivery**
- **Halo effect on a separate cable**

# Headlight HALO 9/15/24 LED SPOT

The Vision X XPL Halo is a discreet, flat LED light strip that is ideal for modern vehicles. It provides sufficient light without taking up much space or attention. With a single row of powerful 5 watt CREE LEDs, this model also features an eye-catching halo lighting effect surrounding the reflectors.

With a rugged aluminum/composite housing and an unbreakable polycarbonate lens, the XPL Halo is designed to meet a variety of challenges. A moisture-resistant pressure relief valve and robust construction allow it to withstand vibrations of up to 15.6 Grms without compromising performance.

The integration of a built-in EMC interference filter (CISPR 25) ensures that it does not interfere with the vehicle's electronic systems. Active temperature control with Prime Drive and ETM enables optimum performance at temperatures from -40°C to +80°C. Certified to CE and RoHS and with a waterproof rating of IP68/IP69K, the XPL Halo is designed to excel even in extreme conditions. With a color temperature of 6000 Kelvin, it provides clear, bright illumination.

Relay cabling and mounting feet are included for easy installation. Side wing brackets are available as optional accessories. In addition, the halo effect works via a separate cable, providing customization options for vehicle lighting.

## Product features:

- **Robust aluminum/composite housing**
- **Unbreakable polycarbonate lens**
- **Moisture resistant pressure relief valve**
- **Robust construction - withstands vibrations up to 15.6 Grms**
- **Built-in EMC interference filter (CISPR 25)- does not interfere with the vehicle's electronic systems**

# Headlight VL Square

Illuminate your work with the VL-Series LED floodlights!

Experience exceptional brightness with the VL-Series LED floodlights, offering outstanding light output in a functional design that can be effortlessly adjusted with a single screw mount. The high quality construction and components ensure that the VL Series LED can withstand vibrations of up to 15.6Grms. The built-in reverse polarity protection provides an additional layer of safety and protects against accidental damage caused by incorrect installation.

The VL-Series LED headlight stands out as a high-quality and versatile solution designed for a variety of lightweight commercial applications.

Whether you work in the fire department, emergency services, construction or agriculture, the VL-Series offers an ideal lighting solution for your work area. Invest in a lighting solution that combines quality, versatility and performance - choose the VL-Series LED headlight for your lighting needs!

## Product features:

- **Outstanding light output: up to 3326 lm eff.**
- **Easy adjustment: single screw mounting**
- **Robust aluminum construction**
- **DT connector that saves time and effort**
- **Voltage range 9-32 volts**
- **Waterproof: IP67**

# Headlight VL Compact 3

## Experience revolutionary lighting performance with the VL series!

Our product not only impresses with its impressive brightness, but also with a functional design that can be easily adjusted with a single screw mount.

Thanks to its high-quality construction and first-class components, the VL series can withstand even intense vibrations of up to 21 grms. This makes it the ideal choice for applications where robustness and reliability are essential.

The integrated protection function against incorrect polarity minimizes the risk of damage due to improper installation. Your safety is our top priority.

The VL series work light is a versatile and cost-effective solution, specially designed for numerous applications. Our LED light offers you the optimum lighting solution for every situation.

Discover the unbeatable combination of quality, versatility and value with the VL series - your reliable choice for any lighting requirement.

### Product features:

- **Housing made of robust composite material**
- **Crystal clear vision with polycarbonate lens**
- **Mounting with stainless steel**
- **DT connector, for a secure connection**
- **Operating voltage from 9 to 32 volts**
- **Efficient energy consumption**
- **Water and dustproof to IP68 / IP69K**
- **High vibration resistance of 21 Grms**
- **Compact dimensions, high performance**
- **Powerful LED technology**
- **EMC and ECE certification**

# Headlight Mirage

The MIRAGE is our first-ever LED light bar for on- and off-road vehicles, combining heavy-duty standards with an automotive look.

This clean auxiliary light ticks all the boxes for durability and design, with smooth edges all round to prevent ice and dirt build-up and a hard-coated polycarbonate lens for excellent impact resistance.

The light cone is designed to be wider than average for the best possible view. Even light distribution in combination with the warm colour temperature of 4500 K gives you a clear advantage - flicker - and streak-free illumination in visually demanding conditions such as rain, dust, fog or snow.

The MIRAGE can be mounted upright or upside down - simply flip it over to suit your application.

The Mirage comes with a breathtaking 6200 lm and when push comes to shove, a 7100 lm boost function for off-road traffic.

**Mirage, 6200lm Standard**

# Headlight SCORPIUS Go 410/420

The Scorpius GO, small, black, bright, impresses with its above-average light output and particularly compact design.

Due to its high quality and the light aluminum housing, the headlight is part of the original equipment of the leading body builders.

The Scorpius GO Reverse is approved as a reversing light according to ECE-R23.

The headlight can be used in the areas of fire brigade, municipal vehicle and special vehicle construction.

# Headlight SCORPIUS PRO 445

The Scorpius PRO 445 is the latest addition to our product range. This is the next generation of Scorpius work lights with an improved design, the latest LED technology and improved color rendering.

The LED work light impresses with its above-average light effectiveness. The Scorpius PRO 445 offers good mechanical properties, is light in weight and has a new lens material with excellent heat tolerance.

The Scorpius PRO 445 has an excellent, asymmetrical "wide flood" light pattern. It can be used universally in the areas of fire brigade, municipal vehicles and special vehicle construction.

# Headlight PICTOR N7301

The Pictor N7301 is a particularly highly effective work light for a precise light image.

It is designed for equipping device booms and vehicle bodies in order to optimize the lighting in a specific area.

The design of the Pictor, its compact construction and its new aluminum housing make it a long-lasting work light.

It can be used universally in the areas of fire brigade, municipal vehicles and special vehicle construction.

# Headlight PICTOR 620

With the Pictor 620 you are guaranteed to hit the mark.

This LED work light was developed for mounting on vehicle bodies in order to optimally and specifically illuminate your work area.

The Pictor 620 is light, small and impresses with its particularly highly effective light output. The mechanical and thermal resistance of the Pictor 620 is excellent thanks to the newly reinforced aluminum housing.

There are two versions available. The first version with an optimized light pattern for mounting below the vehicle body, the second version for mounting above the vehicle body.

The Pictor 620 can be used universally in the areas of fire brigade, municipal vehicles and special vehicle construction.

# Headlight L52 HHS

The L52 HHS is a small, portable hand lamp with a magnetic base. Thanks to its compact design, it can be temporarily attached anywhere on the vehicle when needed.

The direction of radiation can be adjusted so that the L52 HHS shines where the light is needed.

## Product features:

- **Small, compact, portable**
- **Reliable by using the proven L52 headlight module**
- **Connection via the cigarette lighter plug**
- **Beam direction freely adjustable**
- **Magnetic base for fastening anywhere on the body**
- **Two brightness levels, switchable**
- **12/24 V capable**

# Ambient Light SL209

It is extremely important to optimally illuminate the area around the vehicle when visibility is poor. Thanks to its high luminosity, the SL209 ambient light provides the required increased safety.

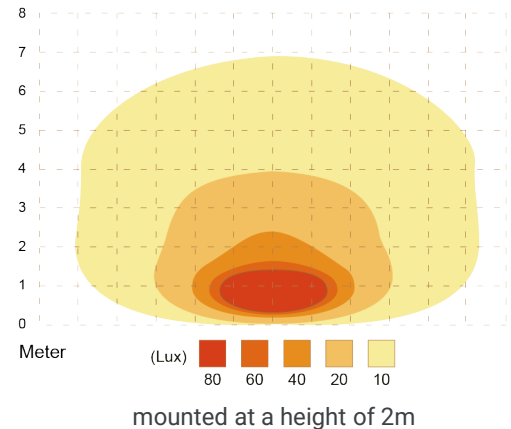

Attachment or retrofitting is extremely easy as the light is attached using 2 screws and only requires one additional hole for the cable bushing. Elaborate cut-outs are therefore unnecessary, which greatly simplifies assembly.

## Product features:

- **Curved design to maximize coverage with a streamlined aesthetic**
- **Over 1730 lumen output**
- **Luminous intensity  $\geq 820$  lux at 1 meter**
- **Certified to ECE R10 and CISPR 25 Class 3**
- **12 - 24 V operating voltage**
- **reverse polarity protection**
- **Available with black, white or red housing**
- **Die-cast aluminium base for efficient heat dissipation and high LED durability**
- **Weatherproof and anti-vibration design for external use**

# Ambient Light F-25S

The F-25S light is a state-of-the-art LED perimeter light that has been specially developed for mounting on the side and/or rear of the vehicle to illuminate the surrounding area extensively and evenly.

Thanks to LED technology with a total of 24 LEDs, the F-25S offers outstanding brightness with a luminous flux of 1000 lm. This luminaire not only achieves high luminosity, but is also extremely energy-efficient, with an energy efficiency class of A++. In addition, it is designed for operation with 12/24 V and therefore adapts to different power sources.

The aluminum housing not only ensures longevity, but also a robust construction that can withstand the demands of the terrain. With its IP67 protection class, the F-25S luminaire is also optimally protected against dust and water.

This light is an ideal solution for illuminating a vehicle's surroundings over a large area and thus improving safety and visibility in different environments.

## Product features:

- LED technology with 24 LEDs
- 1000 lm luminous flux
- Energy efficiency A++
- 12/24 V capable
- Aluminum housing
- Protection class IP67

# Ambient Light L98

The L98 batten luminaire is a slim and robust ambient lighting system specially designed for versatile applications. With its simple mounting system and outstanding price-performance ratio, it offers an optimum solution for various lighting requirements.

Its rectangular aluminum profile allows flexible use in different areas of your vehicle. Whether in the equipment compartment, as an under-cabinet light or for interior lighting - the L98 provides light exactly where it is needed.

Thanks to its versatility and ability to work with 12 / 24 V, it adapts to different vehicles and is available in the sizes 295, 547 and 1051 mm. The robust aluminum housing ensures durability and reliability, even under demanding conditions.

The light bar offers variable mounting options, which means that it can be easily and adaptably installed as required. These features make the L98 an ideal solution for providing effective and reliable light in various vehicle areas.

## Product features:

- **12 / 24 V capable**
- **In 295, 547 and 1051 mm**

# Microphone MIK450A

The active rod microphone MIK 450A is used to make voice announcements via the special signal system. It can be connected directly to a control device or to an operating device using an appropriate connection cable.

The microphone is noise-compensated, has a super cardioid pickup pattern and a large transmission range. This combination guarantees high voice quality.

Thanks to the universal clip holder, the microphone can be attached anywhere in the vehicle and is always at hand when it is needed.

ARTICLE NUMBER	DESCRIPTION
64991001705	
08138525006	

TECHNICAL DATA	
transmission range	20 ... 12,000 Hz
characteristics	supercardioid
AF-level	450 mV
dimensions	Ø 29 x 170 mm
cable	250 ... 2,300 mm coiled cable
weight	approx. 235 g

# Microphone TM110RS

The proven TM110 RS (MIK-103) stick microphone is used to make voice announcements via the special signal system. It can be connected directly to a control device or to an operating device using an appropriate connection cable.

The microphone is noise-compensated, has a cardioid pickup pattern and a large transmission range. This combination guarantees high voice quality.

Thanks to the universal clip holder, the microphone can be attached anywhere in the vehicle and is always at hand when it is needed.

# Multi-Signal-Display MSG

The first full matrix display that complies 100% with the police car guideline. Stop signaling texts (ASG) are shown in red font, information signaling texts (ISG) are shown in yellow font without limits on the sides.

In addition, these full matrix display modules can be combined in any way and the radiation brightness can be customized. In a van, for example, the required legibility is guaranteed at 100 meters.

The display size is individually adapted to the existing rear window (both in width and in height).

## Product features:

- Active LED area 210 x 130 mm per segment
- Segments can be combined horizontally and vertically, so different display sizes can be realized
- 12/24 V capable
- Current consumption: max. 2 A per segment
- Quiescent current: <1 mA
- Luminosity: 30,000 cd
- 100% legibility even with 90% tinted rear windows
- Full matrix display for texts, symbols, arrows and logos as changing texts and scrolling texts
- Configuration of the displayed display content using PC software that can be made available if required
- Various housings for installation in the vehicle
- Control of an external speed camera synchronous to the text is possible

## Radio Patrol Vehicle Directive

- LED spacing approx. 10 mm
- two-tone red / yellow
- Built-in light sensor for automatic dimming (e.g. with the tailgate open and the display folded down)
- Beam angle for ASG texts: 8 ° according to guideline
- ISG texts without restriction, according to guidelines

## Control

- Via CANopen, CIA447 (free text and fixed text IDs)
- Compatible with all standby special signal systems
- Further protocols on request

## TECHNICAL DATA

operating voltage	12/24 VDC (9 ... 32 VDC)
current consumption	at 13.8V: max. 2 A per segment standby current < 1 mA
luminous intensity	30,000 cd
beam angle	red: 8° acc. directive amber: without limitation
LED-distance	approx. 10 mm
LED-colour	red / amber
cascadable segments	theoretically unlimited horizontally and vertically
dimensions - segment	210 x 130 mm
ambient temperature	-40°C ... +85°C
approvals	EMC: E1 10R 059129

# Multi-Signal-Display MSG

## MSG in IP-housing!

Immerse yourself in the future of emergency vehicle equipment with our multi-signal display full matrix display - your reliable companion in critical situations. Developed for police, fire and rescue services, this state-of-the-art system is an indispensable tool for efficient and safe operational coordination.

### Versatile configuration:

The outstanding feature of this multi-signal encoder is its impressive flexibility. The display units can be easily cascaded both vertically and horizontally to ensure optimum visibility. This allows for customization to meet the specific requirements of your vehicle fleet.

### Reliable signaling:

The 2-color LED display - red for alarm signaling (ASG) and yellow for information signaling (ISG) - ensures clear and unambiguous communication in any situation. This not only meets the highest safety standards, but also fulfills the requirements of the patrol car directive with regard to font height and beam angle.

### Simple integration:

Integrating this full matrix display into your vehicle system is child's play and operation is intuitive. It fits seamlessly into your existing equipment and thus optimizes your operational readiness.

Experience a new dimension in emergency vehicle equipment with our full-matrix multi-signal display - precise, flexible and reliable. Invest in the safety of your emergency services and be accompanied by innovative technology.

### Product features:

- **Active LED area 210 x 130 mm per segment**
- **Segments can be combined horizontally and vertically, allowing different display sizes to be realized**
- **12 / 24 V capable**
- **Quiescent current: < 1 mA**
- **Luminosity: 30,000 cd**
- **Full-matrix display for texts, symbols, arrows and logos as changing texts and scroll texts**

Example: MSG 7x1V

Example: MSG 3x1H

Example: MSG 2x1H

Example: MSG 2x1V

# Dashboard-Display DD-100

The dashboard display DD-xxx was developed for vehicles in which a light bar with an integrated display would exceed the maximum vehicle height.

It is mounted discreetly on the dashboard and pops up when switched on. After switching off, it closes again automatically so as not to obstruct the view to the front.

## Product features:

- Flat LED display
- 400 mm full matrix display
- Control via CAN bus
- Several individual texts can be preconfigured
- With and without "Flasher Red" for the stopping process

## TECHNICAL DATA

nominal voltage	12 VDC
operating voltage	10.8 ... 14.4 VDC
current consumption	0 A ( < 1 mA in bus-operation mode) 1 A max.
ambient temperature	-25 °C ... +70 °C - storage / transport -40 °C ... +80 °C
LED-colour	red
weight	approx. 1.3 kg
dimensions (w x h x d)	- shut down 496 x 46 x 105 mm - open 496 x 120 x 105 mm
approval	EMC acc. ECE R10

# Lightbar W3 AERO

---

Our W3 AERO lightbar is specially designed for use at airports and offers all the outstanding features of the tried-and-tested W3 lightbar. With its robust construction and versatile functions, the W3 AERO is the ideal solution for airport operators who need to guarantee the highest safety standards.

#### **EASA Type C and D conformity:**

The W3 AERO meets all requirements of the European Aviation Safety Agency (EASA) Type C and D standards to ensure reliable and safe use at airports. It is manufactured according to customer requirements, depending on the planned use and equipment specifications.

#### **Amber warning lights:**

Clear amber warning lights provide clear visibility and identify potential danger areas.

#### **Red flashers to the front and rear:**

Eye-catching red flashers at the front and rear of the light bar increase visibility and contribute to flight safety.

#### **Brake and position light:**

Integrated brake and position lights improve night visibility and support the precise positioning of aircraft.

#### **Forward, rear and side headlights:**

Powerful headlights provide excellent illumination to the front, rear and sides to ensure optimum visibility in all operating situations.

#### **Rear warning system:**

An effective rear warning system warns of potential obstacles or hazardous situations and contributes to airport safety.

Our Lightbar W3 AERO not only offers outstanding performance and reliability, but also meets the stringent requirements of the aviation industry to ensure smooth and safe operations at airports.

# Lightbar Z2 AERO

The Lightbar Z2 AERO is the ultimate solution for use at airports and inherits all the outstanding features of the proven Lightbar Z2. Developed to meet the highest standards, this product fulfills all EASA Type C and D requirements, setting a new benchmark in airport lighting and safety. Customer-specific production means that it can be individually adapted to the requirements specifications and the place of use.

**Amber warning lights:**

Clear warning signals for approaching aircraft and ground vehicles.

**Red flashers to the front and rear:**

Clear visibility from all directions for maximum safety.

**Brake and position light:**

Improved ground marking and signal clarity.

**Headlight to the front, rear and side:**

Optimum illumination of the work area and surroundings.

**Rear warning system:**

To draw attention to hazardous situations.

**Full-matrix LED display to the front and rear:**

Flexible text display for important information. Text display with yellow or red LEDs (also combined) possible.

The Lightbar Z2 AERO guarantees efficient and safe control of airport traffic. With its robust design and ability to display clear text information in different colors, it is a reliable choice for use in demanding environments.

# Multi-Signal-Display / Warning lights for Airports

## LED full matrix display MSG (multi-signal-display)!

Now messages can be taken to the next level and presented with a state-of-the-art, individually configurable display.

Our full matrix displays are perfect for any application, be it fixed mounting or flip-up / flip-down. With the flexibility to display text in red or yellow, depending on requirements, you can ensure that messages always arrive exactly as they should.

The size of the display is almost infinitely customizable, so the perfect fit for the location can be found.

Experience the freedom of individual design and the performance of our LED technology - with the MSG LED full matrix display.

## GyroLED M80, M130 and GyroLED class 1

With their outstanding quality and reliability, they are the ideal choice for ensuring safety in the airport area.

### EASA Type C conformity:

The GyroLED Class 1, GyroLED M80 and GyroLED M130 fully comply with EASA Type C requirements, ensuring the highest standards of quality and safety.

### Versatile application options:

These warning lights offer various mounting options to meet the different requirements and conditions at the airport. Whether for runways, taxiways or other areas - the GyroLED series can be used flexibly.

### Outstanding visibility:

The GyroLED warning lights ensure excellent visibility, both during the day and at night. This is particularly important for alerting pilots and ground personnel to potential hazards.

### Durable and low maintenance:

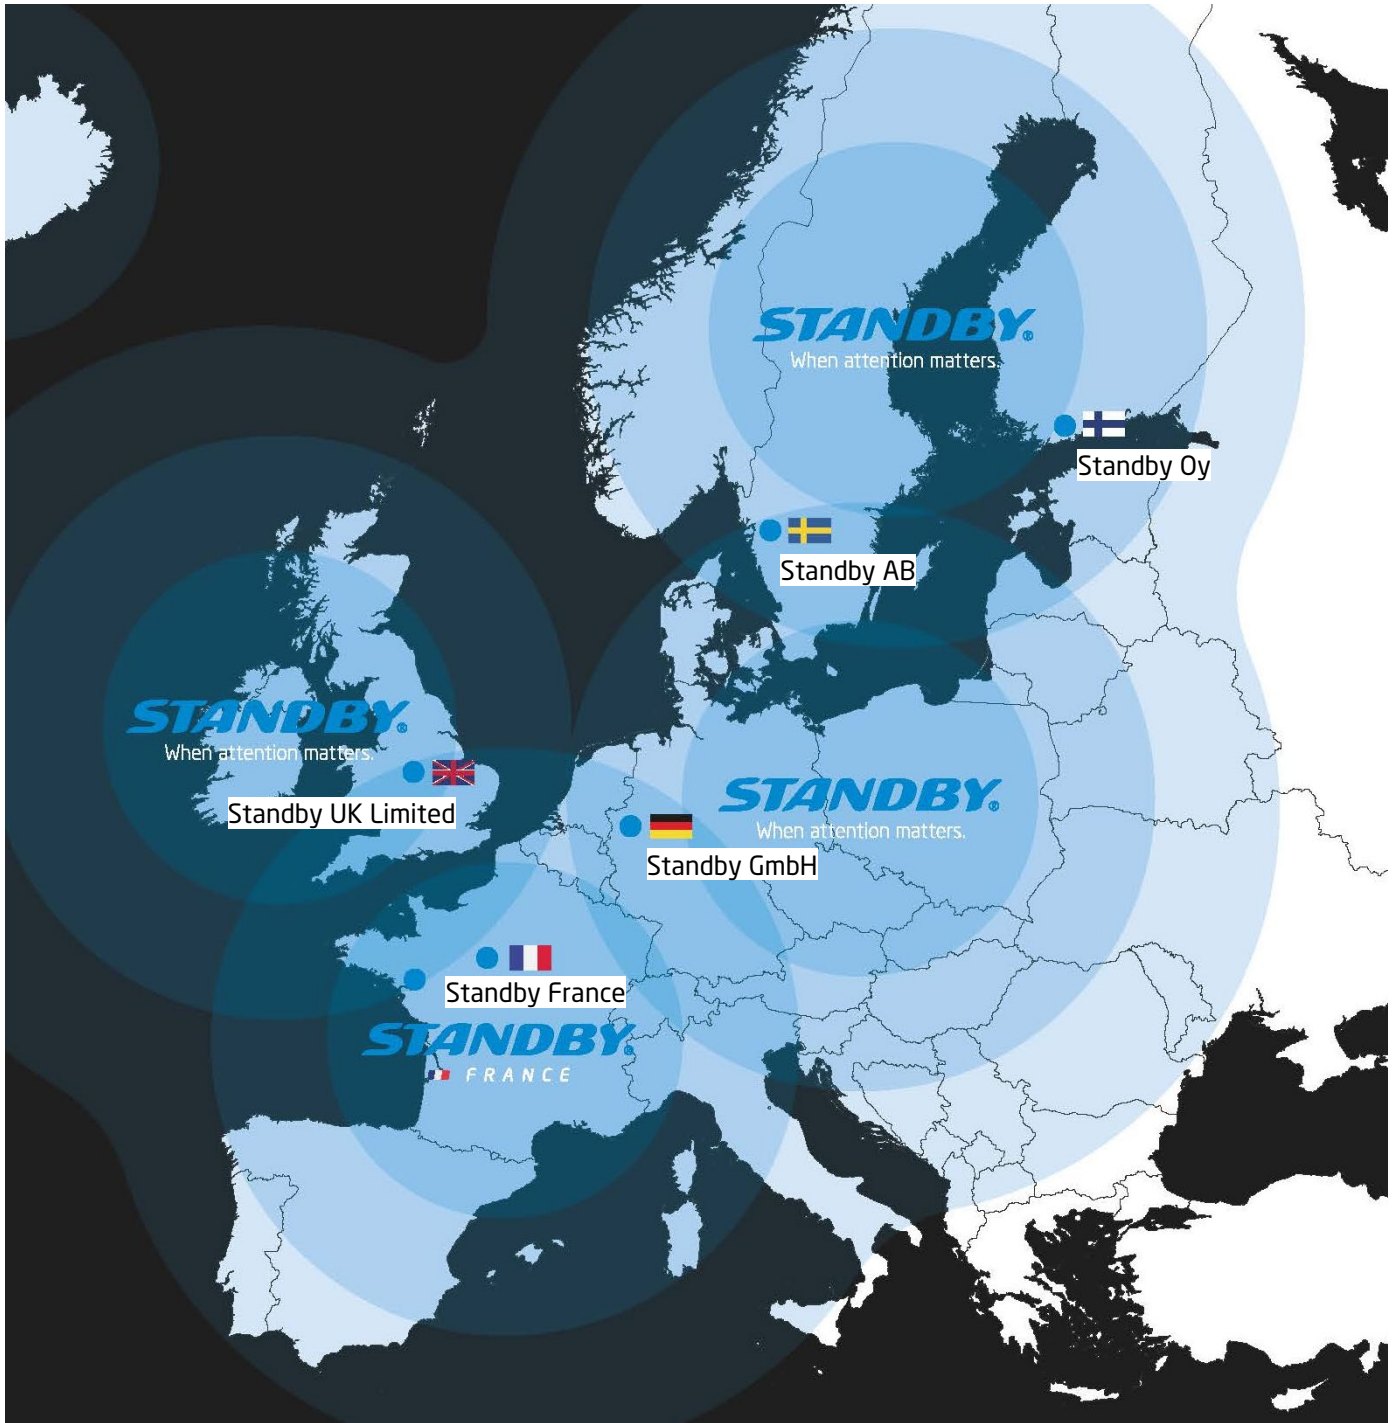

The materials used and the first-class workmanship ensure a long service life and minimize maintenance requirements. This guarantees continuous operation of the beacon.

### Simple installation:

The different surface-mounted variants enable simple and efficient installation of the GyroLED warning lights. They can be positioned quickly and easily at the required locations.
