

CUSTOMER SPOTLIGHT

# JACK HODSON LTD. PROVIDING MUTUAL SUPPORT TO STANDBY RSG

Standby RSG has been supplying Vehicle Installation and Conversion Specialist Jack Hodson Ltd. for many years with Control Systems and Lighting Solutions for the Emergency sector. The family owned business, which has been trading since 1966, converts both marked and unmarked police vehicles for a wide range of UK fleets as well as rescue and recovery units.

Danny Hodson of Jack Hodson Ltd. stated the following when asked about their association with the team; "Standby RSG and ourselves have a long and well established working relationship that has developed over many years with the supply of Control Systems and Lighting Solutions. The team has always offered a personable and flexible approach to developing tailored solutions to meet the forces evolving requirements and specifications."

Jack Hodson Ltd. welcomed Standby RSG representatives recently for a look behind the scenes to see how the product range is utilised by the team. Customisable solutions are imperative when catering for such a diverse customer base with varying needs and where a 'one-size-fits-all' design isn't suitable, Standby RSG's products triumph.

For Volvo installations, the CARAT Switch System is a popular choice at Jack Hodson Ltd., integrating into

the existing infotainment system to offer complete external hazard warning equipment control via the touch-screen. Developed exclusively with the Volvo team, the system fits all 60 and 90 series from 2019 as well as new 40 series vehicles.

MCS Control Systems are often used as the 'heart and brain' of the installation, providing a user programmable solution for managing hazard warning lights and power related functions on emergency vehicles. These devices incorporate a host of discrete on/off and various data protocol inputs and outputs to control a wide variety of applications.

Another popular choice for fittings carried out at Jack Hodson Ltd. is the Traffic Commander LED Matrix Display which is easily programmable and can store up to 100 words. With a flip up/down version as well as a fixed unit, the Traffic Commander can be used for both covert and overt installations and is compatible with the hand held controller included or can be programmed to work with the CARAT System.

Dependant on client budget, some installations include top of the range lightbars such as the W3 LED Lightbar; a world-class, highly customisable emergency lighting solution, built with quality in mind. The robust, aerodynamic design features newly developed two-colour interior modules, offering a whole host of additional new possibilities.

Working closely with Vehicle Installers like Jack Hodson Ltd. means that Standby RSG are able to develop bespoke solutions tailored to the customer's requirements, which can often vary from force to force. The teams are currently collaborating on an exciting project involving the CARAT system, which will be disclosed at a later date.
