

## L52 / L52 2C

The L52 offers you an extremely flat design combined with high light output to R65 standards. With a wide range of technical options and the associated approvals, this LED unit offers you significantly more options than the simple basic function of an LED module.

In addition to the classic front and rear flash variant, the L52 can also be used as work lights, indicators, brake and position lights, and as marker lights. The two colours of the L52 2C model result in a wealth of additional uses.

### Product features:

- Approvals as:
  - directional beacon (front or rear flash / blue light extension)
  - Warning system
  - Turn signals
  - Brake light
  - Position light
- Total installation height of 9mm, including driver
- Available in one or two colours; combine e.g. an RWS system with a blue light extension or a headlight in a module.
- Can be used for flashing and / or static use
- Synchronisable
- Programmable (choose between synchronous, alternating, lightning pattern, etc.)
- Available in 5 colours (blue, amber, red, white, green)
- 2 versions for applications (horizontal or vertical)
- Suitable for 12/24 V.

Sample images L52 2C blue / amber (blue light extension and rear warning system) in combination with an L52 static white for illuminating the interior.

## Front Windshield Module L52

The bracket is designed in such a way that the light emission in the vehicle interior to driver is minimised. A special permit is required for operation.

### Product features

- Specially designed L52 Module & Housing
- L52 LED module already installed
- Two sizes available
- Simple assembly with double-sided adhesive tape
- Adjustable light emission angle
